

# Project Development

## Delivery Of Sprint-1

Date	03 October 2022
Team ID	PNT2022TMID37447
Project Name	Project - Corporate Employee Attrition Analytics

## CODING & SOLUTIONING

### DATASET:

- Employee Attrition Analysis (Logistic Regression Model)
- Employee Attrition Analysis (Logistic Regression Model)
- <https://www.kaggle.com/vjchoudhary7/hr-analytics-case-study>

### DATA UNDERSTANDING:

The data received for the analysis can be divided into 4 broad categories -

- General Data – General data, acquired from HR
- Employee Survey Data – Data collected from yearly employee survey
- Manager Survey Data – Data collected from yearly manager survey
- Biometric Data – Daily in and out times for each employee, collected using biometric attendance machines

General Data	Manager Survey Data	Employee Survey Data	Biometric Data
Age	Job Involvement	Environment Satisfaction	In Time
Attrition (Yes/No)	Performance Rating	Job Satisfaction	Out Time
Department		Work Life Balance	
Education Field			

## UNDERSTANDING THE DATASET:

Let us try to understand each field of the data (general\_data.csv)

Below are the values each column has. The column names are pretty self-explanatory.

1. AGE Numerical Value
2. ATTRITION Employee leaving the company (0=no, 1=yes)
3. BUSINESS TRAVEL (1=No Travel, 2=Travel Frequently, 3=Travel Rarely)
4. DEPARTMENT (1=HR, 2=R&D, 3=Sales)
5. DISTANCE FROM HOME Numerical Value - THE DISTANCE FROM WORK TO HOME
6. EDUCATION Numerical Value. (1 'Below College' 2 'College' 3 'Bachelor' 4 'Master' 5 'Doctor')
7. EDUCATION FIELD (1=HR, 2=LIFE SCIENCES, 3=MARKETING, 4=MEDICAL SCIENCES, 5=OTHERS, 6= TECHNICAL)
8. EMPLOYEE COUNT Numerical Value
9. EMPLOYEE ID Numerical Value
10. GENDER (1=FEMALE, 2=MALE)
11. JOB LEVEL Numerical Value
12. JOB ROLE (1=HR REP, 2=HR, 3=LAB TECHNICIAN, 4=MANAGER, 5=MANAGING DIRECTOR, 6= RESEARCH DIRECTOR, 7= RESEARCH SCIENTIST, 8=SALES EXECUTIVE, 9= SALES REPRESENTATIVE)
13. MARITAL STATUS (1=DIVORCED, 2=MARRIED, 3=SINGLE)
14. MONTHLY INCOME Numerical Value - MONTHLY SALARY
15. NUMCOMPANIES WORKED Numerical Value - NO. OF COMPANIES WORKED AT
16. OVER 18 (1=YES, 2=NO)
17. PERCENT SALARY HIKE Numerical Value - PERCENTAGE INCREASE IN SALARY
18. STANDARD HOURS Numerical Value - STANDARD HOURS
19. STOCK OPTIONS LEVEL Numerical Value - STOCK OPTIONS (Higher the number, the more stock option an employee has)
20. TOTAL WORKING YEARS Numerical Value - TOTAL YEARS WORKED
21. TRAINING TIMES LAST YEAR Numerical Value - HOURS SPENT TRAINING

22. YEARS AT COMPANY Numerical Value - TOTAL NUMBER OF YEARS AT THE COMPANY
23. YEARS SINCE LAST PROMOTION Numerical Value - LAST PROMOTION
24. YEARS WITH CURRENT MANAGER Numerical Value - YEARS SPENT WITH CURRENT MANAGER

b. Let us try to understand about each field of the data  
(employee\_survey\_data.csv)

1. Employee ID
2. Environment Satisfaction (1 'Low' 2 'Medium' 3 'High' 4 'Very High')
3. Job Satisfaction (1 'Low' 2 'Medium' 3 'High' 4 'Very High')
4. Work Life Balance (1 'Bad', 2 'Good', 3 'Better', 4 'Best')

c. Let us try to understand about each field of the data  
(manager\_survey\_data.csv)

1. Employee ID
2. Job Involvement (1 'Low' 2 'Medium' 3 'High' 4 'Very High')
3. Performance Rating (1 'Low', 2 'Good', 3 'Excellent', 4 'Outstanding')

## **SOLUTION REQUIRED:**

- To model the probability of attrition using a logistic regression
- Business Understanding
- Data Understanding – sources of the data, meaning of the data
- Data preparation & EDA
- Model Building
- Model Evaluation
- Data Visualization charts
- Dashboard Creation

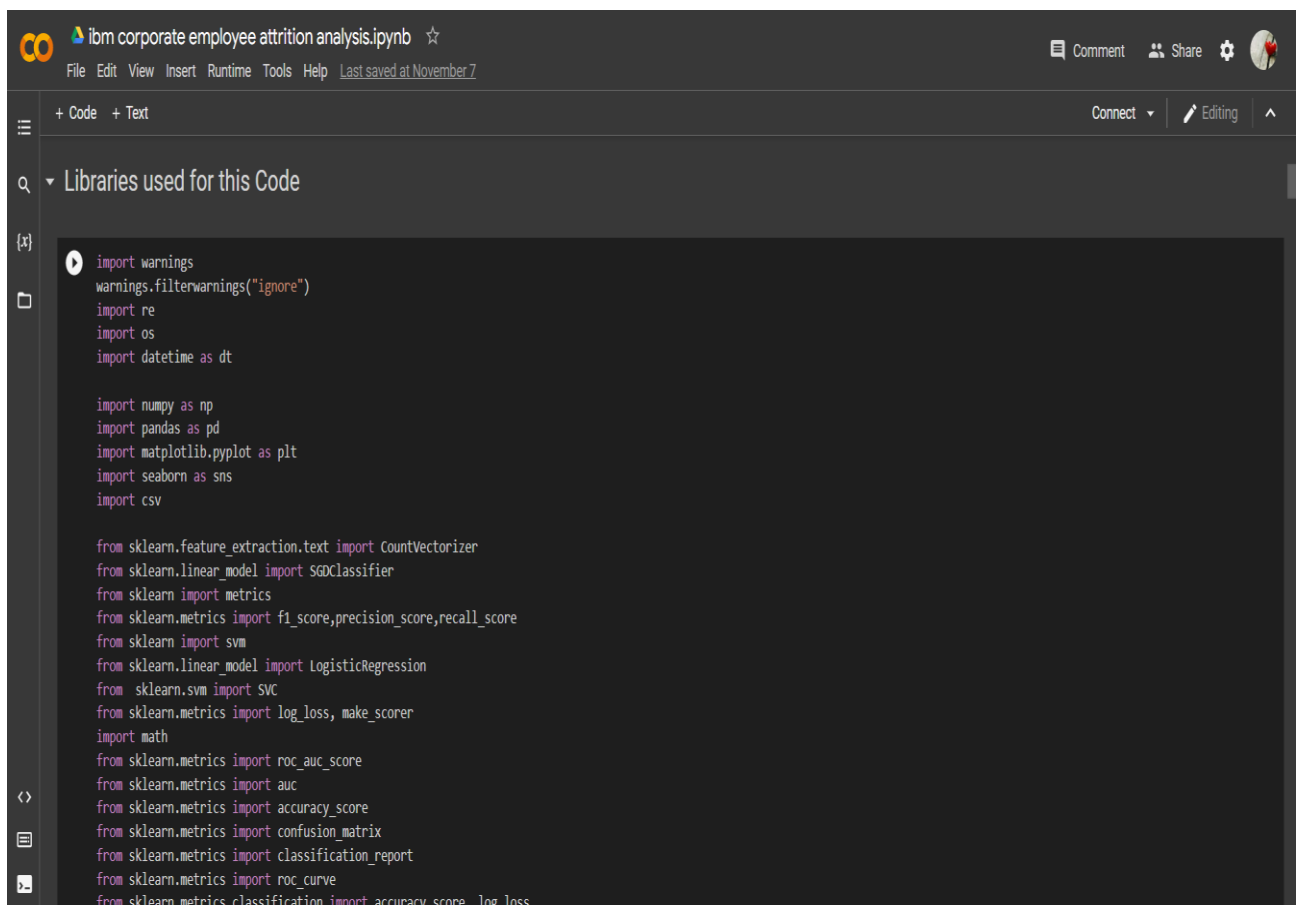

## **METHODOLOGY USED:**

- Predictive modelling of attrition
- Recommending ways for company XYZ to decrease its level of attrition

## TO MODEL THE PROBABILITY OF ATTRITION USING A LOGISTIC REGRESSION

### BUSINESS UNDERSTANDING, IMPORTING PACKAGES, UNDERSTANDING THE DATA AND EDA

#### LIBRARIES USED FOR THIS CODE:

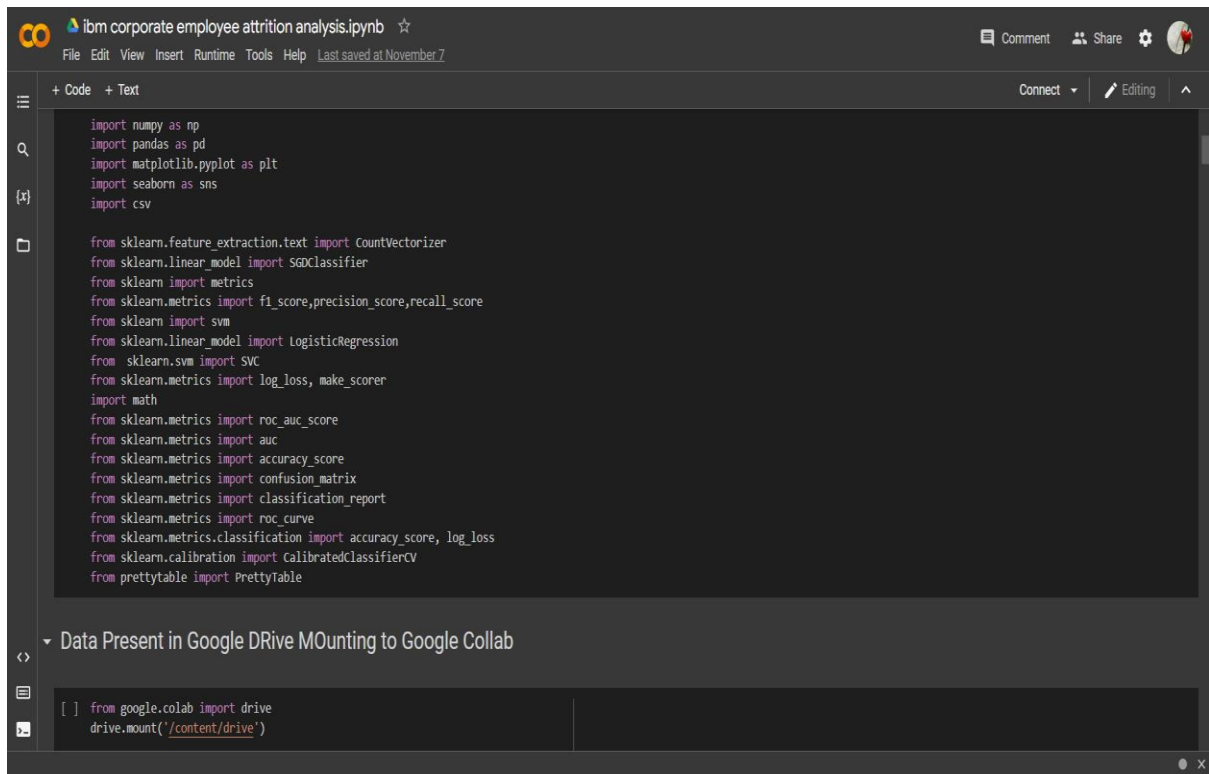

The screenshot shows a Jupyter Notebook interface with a dark theme. The title bar at the top reads "ibm corporate employee attrition analysis.ipynb" with a star icon on the right. Below the title bar is a menu bar with options: File, Edit, View, Insert, Runtime, Tools, Help, and a status bar indicating "Last saved at November 7". On the right side of the title bar are icons for Comment, Share, and a user profile. Below the menu bar is a toolbar with "+ Code" and "+ Text" buttons, and a "Connect" button. The main area of the notebook is titled "Libraries used for this Code" and contains a list of Python imports. The imports are as follows:

```
import warnings
warnings.filterwarnings("ignore")
import re
import os
import datetime as dt

import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import csv

from sklearn.feature_extraction.text import CountVectorizer

from sklearn.metrics import classification_report
from sklearn.metrics import roc_curve
from sklearn.metrics.classification import accuracy_score, log_loss
from sklearn.calibration import CalibratedClassifierCV
from prettytable import PrettyTable
```

**TO READ ALL THE CSV FILES:**

```
[ ] from google.colab import drive
drive.mount('/content/drive')

#!ls "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics"

!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/general_data.csv" "general_data.csv"
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/employee_survey_data.csv" "employee_survey_data.csv"
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/manager_survey_data.csv" "manager_survey_data.csv"
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/in_time.csv" "in_time.csv"
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/out_time.csv" "out_time.csv"

Drive already mounted at /content/drive; to attempt to forcibly remount, call drive.mount("/content/drive", force_remount=True).
```

## CODING:

```
from google.colab import drive
```

```
drive.mount('/content/drive')
```

```
#!ls "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics"
```

```
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/general_data.csv" "general_data.csv"
```

```
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/employee_survey_data.csv" "employee_survey_data.csv"
```

```
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/manager_survey_data.csv" "manager_survey_data.csv"
```

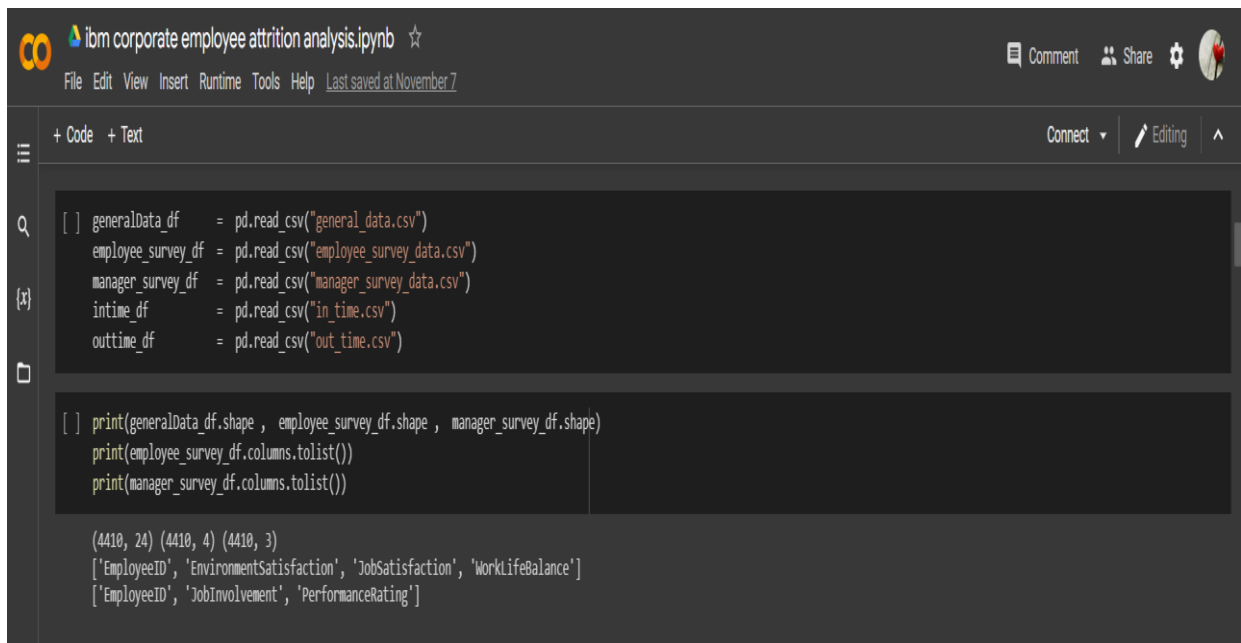

```
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/in_time.csv" "in_time.csv"
```

```
!cp "/content/drive/My Drive/Kaggle_dataset/HR_analytics/PA-I Case Study HR Analytics/out_time.csv" "out_time.csv"
```

## OUTPUT:

Drive already mounted at /content/drive; to attempt to forcibly remount, call drive.mount("/content/drive", force\_remount=True).

## CODING:

The screenshot shows a Jupyter Notebook titled "ibm corporate employee attrition analysis.ipynb". The code is as follows:

```
[ ] generalData_df = pd.read_csv("general_data.csv")
employee_survey_df = pd.read_csv("employee_survey_data.csv")
manager_survey_df = pd.read_csv("manager_survey_data.csv")
intime_df = pd.read_csv("in_time.csv")
outtime_df = pd.read_csv("out_time.csv")

[ ] print(generalData_df.shape , employee_survey_df.shape , manager_survey_df.shape)
print(employee_survey_df.columns.tolist())
print(manager_survey_df.columns.tolist())
```

The output of the code is displayed below the cells:

```
(4410, 24) (4410, 4) (4410, 3)
['EmployeeID', 'EnvironmentSatisfaction', 'JobSatisfaction', 'WorkLifeBalance']
['EmployeeID', 'JobInvolvement', 'PerformanceRating']
```

```
generalData_df = pd.read_csv("general_data.csv")
```

```
employee_survey_df = pd.read_csv("employee_survey_data.csv")
```

```
manager_survey_df = pd.read_csv("manager_survey_data.csv")
```

```
intime_df = pd.read_csv("in_time.csv")
```

```
outtime_df = pd.read_csv("out_time.csv")
```

```
print(generalData_df.shape , employee_survey_df.shape , manager_survey_df.
shape)
```

```
print(employee_survey_df.columns.tolist())
```

```
print(manager_survey_df.columns.tolist())
```

## OUTPUT:

```
(4410, 24) (4410, 4) (4410, 3)
['EmployeeID', 'EnvironmentSatisfaction', 'JobSatisfaction',
'WorkLifeBalance']
['EmployeeID', 'JobInvolvement', 'PerformanceRating']
```

## MERGING OF DATA:

The screenshot shows a Jupyter Notebook titled "ibm corporate employee attrition analysis.ipynb". The code cell contains the following Python code:

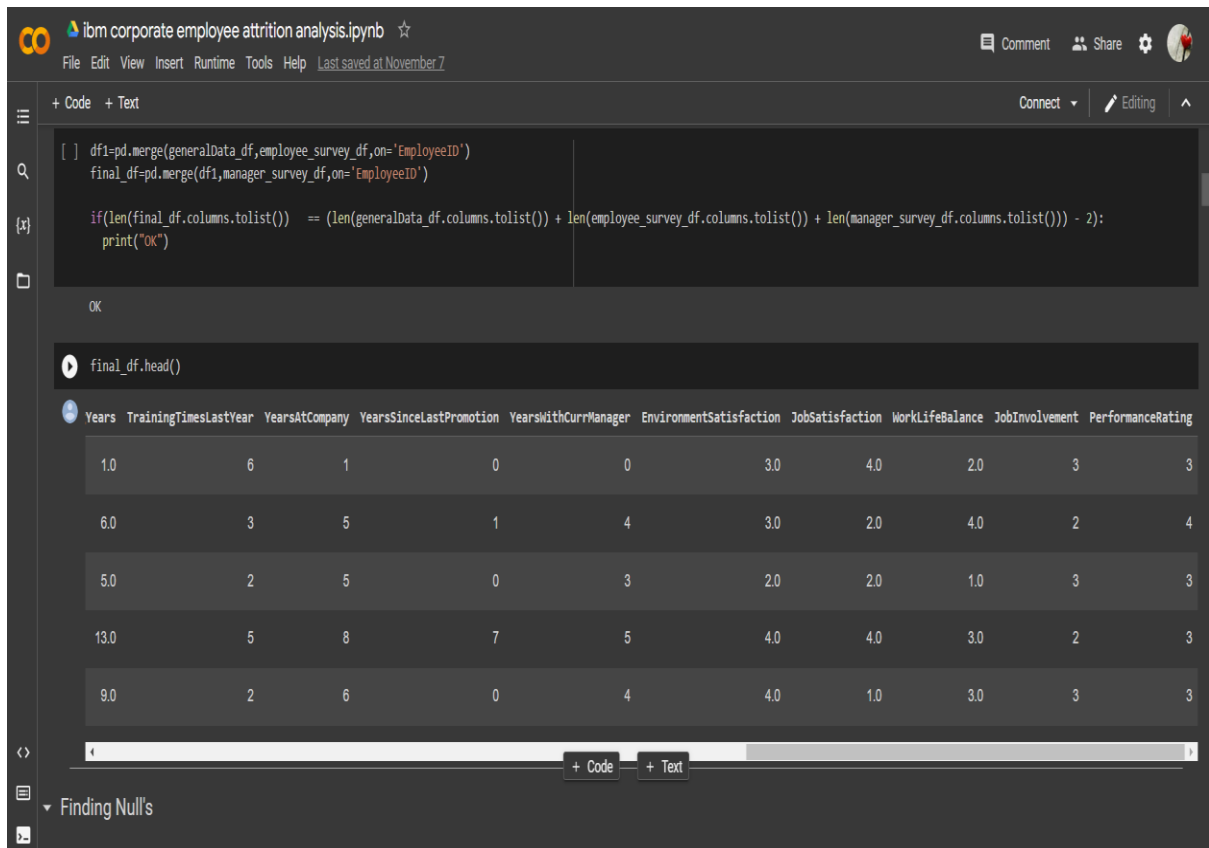

```
[ ] df1=pd.merge(generalData_df,employee_survey_df,on='EmployeeID')
final_df=pd.merge(df1,manager_survey_df,on='EmployeeID')

if(len(final_df.columns.tolist()) == (len(generalData_df.columns.tolist()) + len(employee_survey_df.columns.tolist()) + len(manager_survey_df.columns.tolist()) - 2):
    print("OK")
```

The output of the code is "OK". Below the code cell, the command `final_df.head()` is executed, displaying the first five rows of the merged DataFrame. The DataFrame has 15 columns: Age, Attrition, BusinessTravel, Department, DistanceFromHome, Education, EducationField, EmployeeCount, EmployeeID, Gender, JobLevel, JobRole, MaritalStatus, MonthlyIncome, and Num.

	Age	Attrition	BusinessTravel	Department	DistanceFromHome	Education	EducationField	EmployeeCount	EmployeeID	Gender	JobLevel	JobRole	MaritalStatus	MonthlyIncome	Num
0	51	No	Travel_Rarely	Sales	6	2	Life Sciences	1	1	Female	1	Healthcare Representative	Married	131160	
1	31	Yes	Travel_Frequently	Research & Development	10	1	Life Sciences	1	2	Female	1	Research Scientist	Single	41890	
2	32	No	Travel_Frequently	Research & Development	17	4	Other	1	3	Male	4	Sales Executive	Married	193280	
3	38	No	Non-Travel	Research & Development	2	5	Life Sciences	1	4	Male	3	Human Resources	Married	83210	
4	32	No	Travel_Rarely	Research & Development	10	1	Medical	1	5	Male	1	Sales Executive	Single	23420	

At the bottom of the notebook interface, there is a section titled "Finding Null's".

```
[ ] df1=pd.merge(generalData_df,employee_survey_df,on='EmployeeID')
    final_df=pd.merge(df1,manager_survey_df,on='EmployeeID')

if(len(final_df.columns.tolist()) == (len(generalData_df.columns.tolist()) + len(employee_survey_df.columns.tolist()) + len(manager_survey_df.columns.tolist()) - 2):
    print("OK")
```

OK

```
final_df.head()
```

Years	TrainingTimesLastYear	YearsAtCompany	YearsSinceLastPromotion	YearsWithCurrManager	EnvironmentSatisfaction	JobSatisfaction	WorkLifeBalance	JobInvolvement	PerformanceRating
1.0	6	1	0	0	3.0	4.0	2.0	3	3
6.0	3	5	1	4	3.0	2.0	4.0	2	4
5.0	2	5	0	3	2.0	2.0	1.0	3	3
13.0	5	8	7	5	4.0	4.0	3.0	2	3
9.0	2	6	0	4	4.0	1.0	3.0	3	3

## CODING:

```
df1=pd.merge(generalData_df,employee_survey_df,on='EmployeeID')
```

```
final_df=pd.merge(df1,manager_survey_df,on='EmployeeID')
```

```
if(len(final_df.columns.tolist()) == (len(generalData_df.columns.tolist()) + len(employee_survey_df.columns.tolist()) + len(manager_survey_df.columns.tolist()) - 2):
```

```
    print("OK")
```

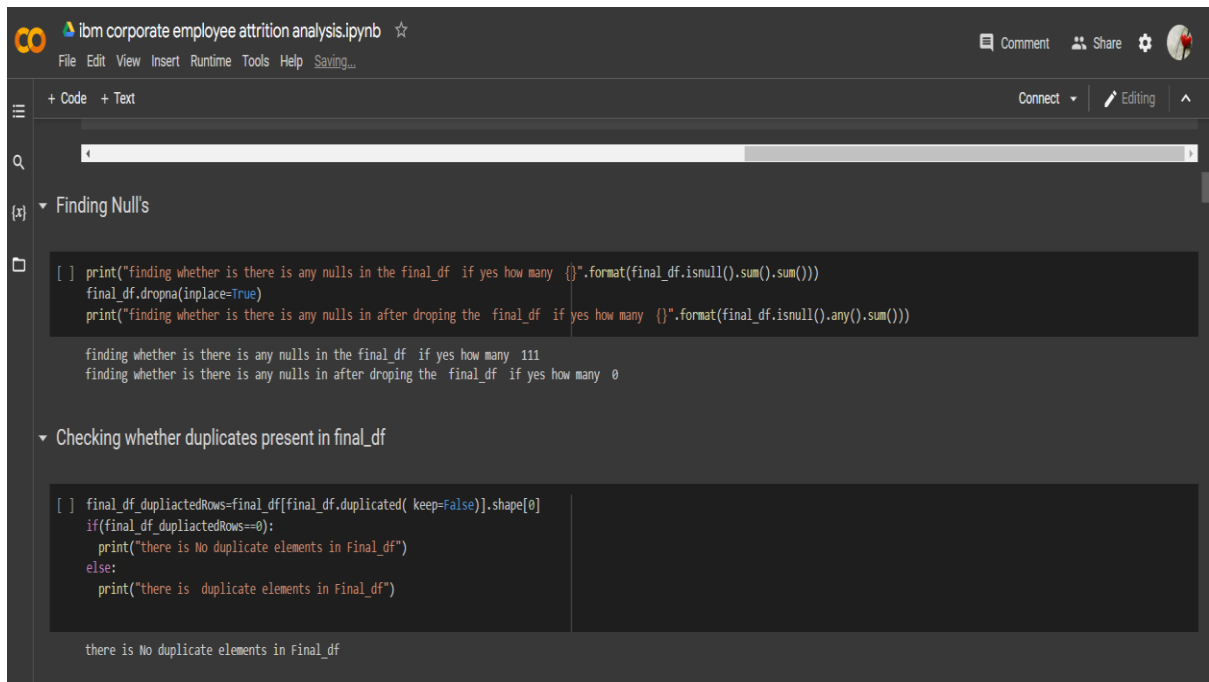

## OUTPUT:

OK

Age	Attrition		BusinessTravel		Department		DistanceFromHome			Education													
	EducationField	EmployeeCount	EmployeeID	Gender	JobLevel	JobRole	MaritalStatus	MonthlyIncome	NumCompaniesWorked	Over18	PercentSalaryHike	StandardHours	StockOptionLevel	TotalWorkingYears	TrainingTimesLastYear	YearsAtCompany	YearsSinceLastPromotion	YearsWithCurrManager	EnvironmentSatisfaction	JobSatisfaction	WorkLifeBalance	JobInvolvement	PerformanceRating

**FINDING NULL'S:**

**CODING:**

The screenshot shows a Jupyter Notebook titled "ibm corporate employee attrition analysis.ipynb". The interface includes a menu bar (File, Edit, View, Insert, Runtime, Tools, Help), a toolbar with icons for code and text, and a search bar. The notebook content is divided into two sections: "Finding Null's" and "Checking whether duplicates present in final\_df".

**Finding Null's**

```
[ ] print("finding whether is there is any nulls in the final_df if yes how many {}".format(final_df.isnull().sum().sum()))
final_df.dropna(inplace=True)
print("finding whether is there is any nulls in after dropping the final_df if yes how many {}".format(final_df.isnull().any().sum()))
```

finding whether is there is any nulls in the final\_df if yes how many 111  
finding whether is there is any nulls in after dropping the final\_df if yes how many 0

**Checking whether duplicates present in final\_df**

```
[ ] final_df_duplicatedRows=final_df[final_df.duplicated( keep=False)].shape[0]
if(final_df_duplicatedRows==0):
    print("there is No duplicate elements in final_df")
else:
    print("there is duplicate elements in final_df")
```

there is No duplicate elements in final\_df

```
print("finding whether is there is any nulls in the final_df if yes how many {}".format(final_df.isnull().sum().sum()))
```

```
final_df.dropna(inplace=True)
```

```
print("finding whether is there is any nulls in after dropping the final_df if yes how many {}".format(final_df.isnull().any().sum()))
```

## OUTPUT:

```
finding whether is there is any nulls in the final_df if yes how many 111
finding whether is there is any nulls in after dropping the final_df if yes how many 0
```

```
finding whether is there is any nulls in the final_df if yes how many 111
```

```
finding whether is there is any nulls in after dropping the final_df if yes how many 0
```

## CHECKING WHETHER DUPLICATES PRESENT IN FINAL\_DF

## CODING:

The screenshot shows a Jupyter Notebook titled "ibm corporate employee attrition analysis.ipynb". The code cell is titled "Checking whether duplicates present in final\_df". The code defines a variable `final_df_dupliactedRows` as the shape of the DataFrame after removing duplicates. It then uses an `if` statement to print a message indicating whether there are duplicates.

```
final_df_dupliactedRows=final_df[final_df.duplicated( keep=False)].shape[0]
if(final_df_dupliactedRows==0):
    print("there is No duplicate elements in Final_df")
else:
    print("there is duplicate elements in Final_df")
```

The output of the code is displayed at the bottom: "there is No duplicate elements in Final\_df".

```
final_df_dupliactedRows=final_df[final_df.duplicated( keep=False)].shape[0]
if(final_df_dupliactedRows==0):
    print("there is No duplicate elements in Final_df")
else:
    print("there is duplicate elements in Final_df")
```

## OUTPUT:

```
there is No duplicate elements in Final_df
```

EDA

We will cover how to visually analyse:

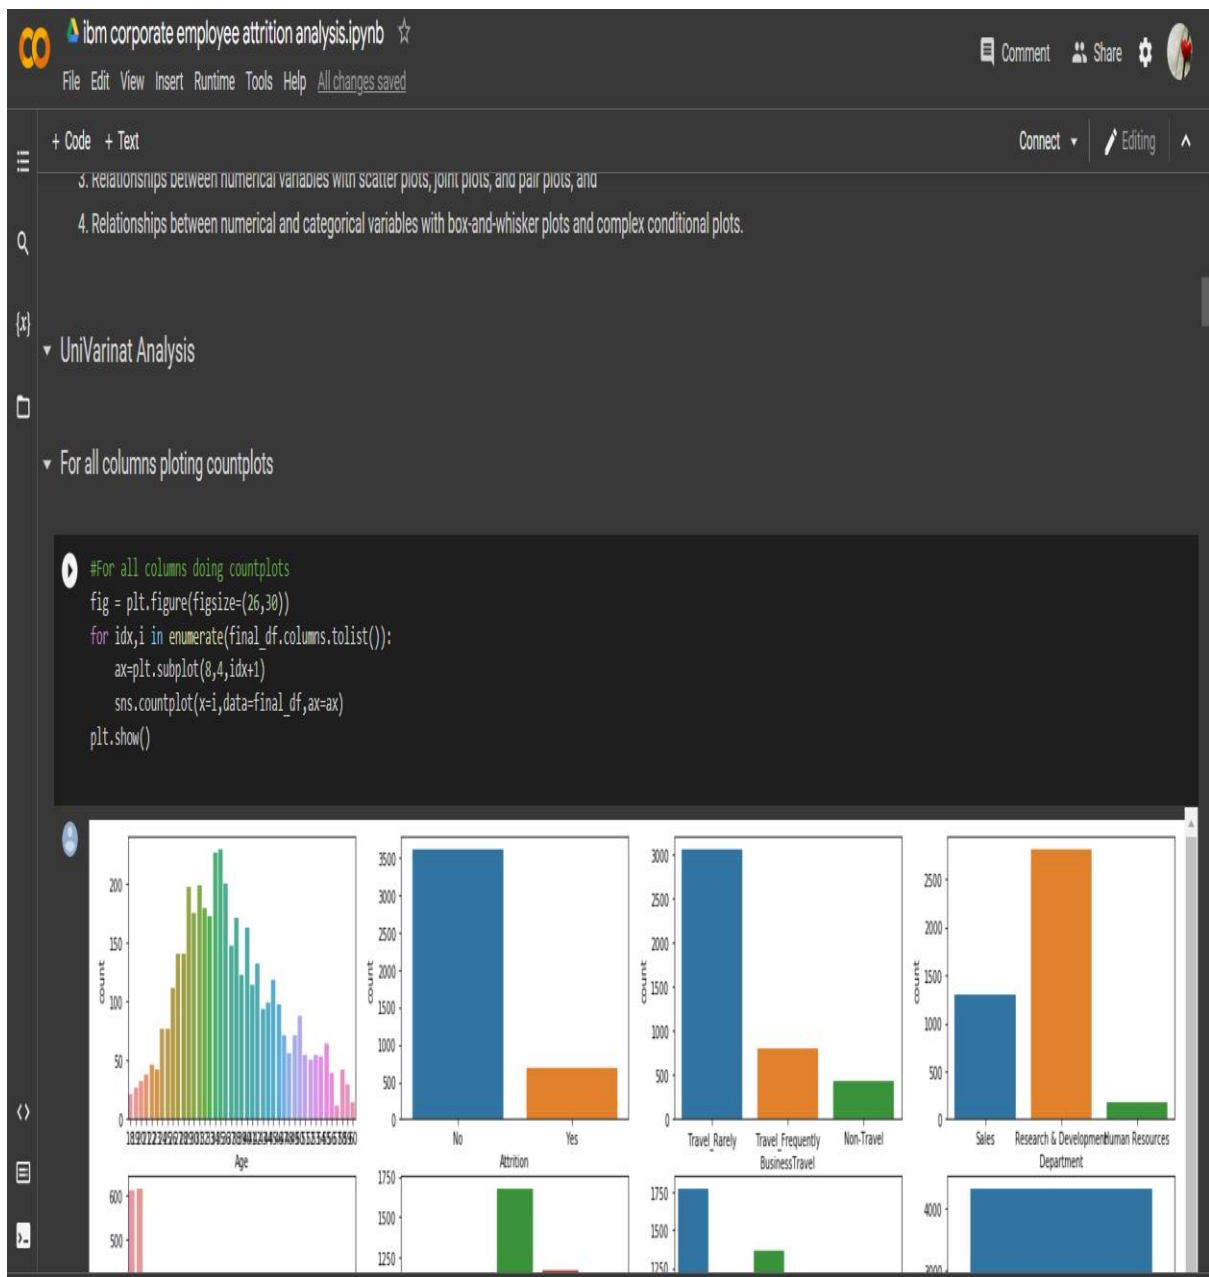

- Numerical variables with histograms,
- Categorical variables with count plots,
- Relationships between numerical variables with scatter plots, joint plots, and pair plots, and
- Relationships between numerical and categorical variables with box-and-whisker plots and complex conditional plots

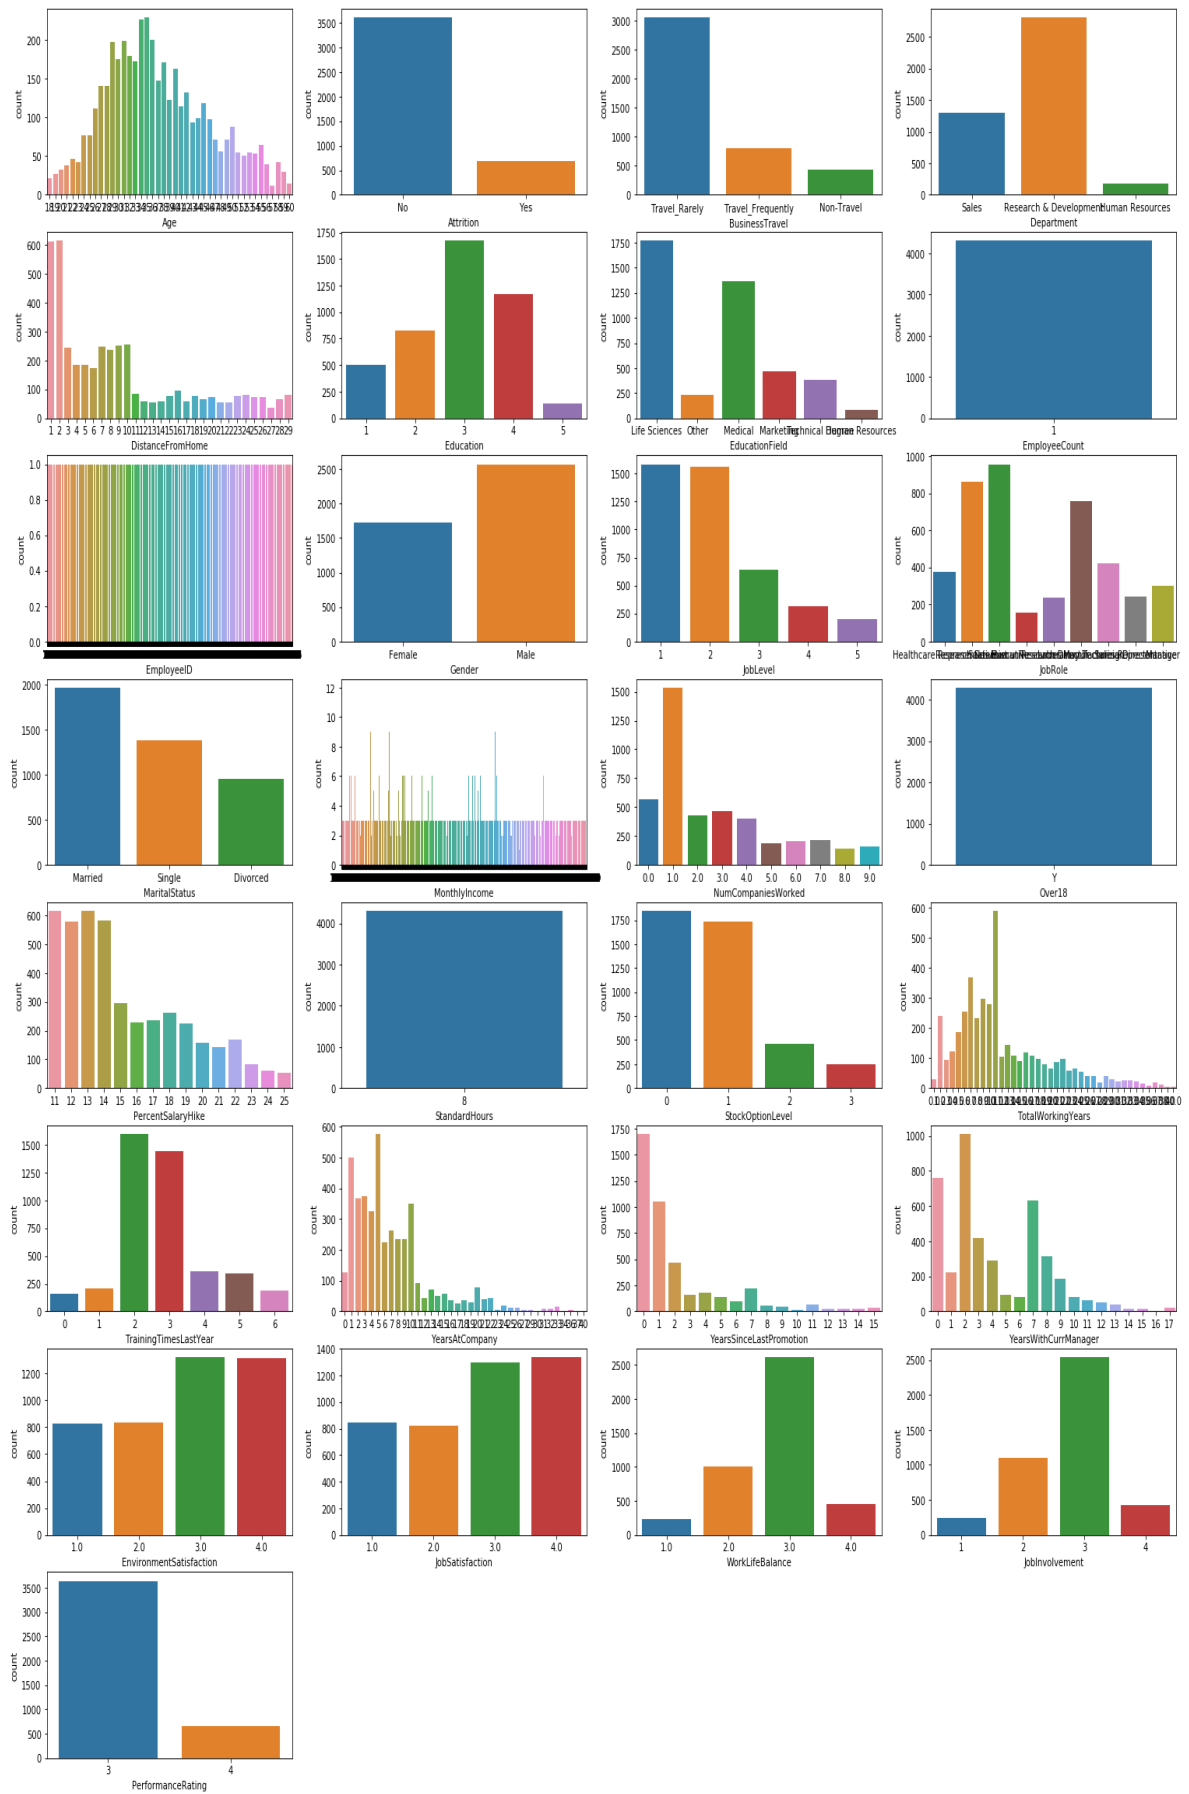

## UNIVARIANT ANALYSIS

### FOR ALL COLUMNS PLOTTING COUNT PLOTS

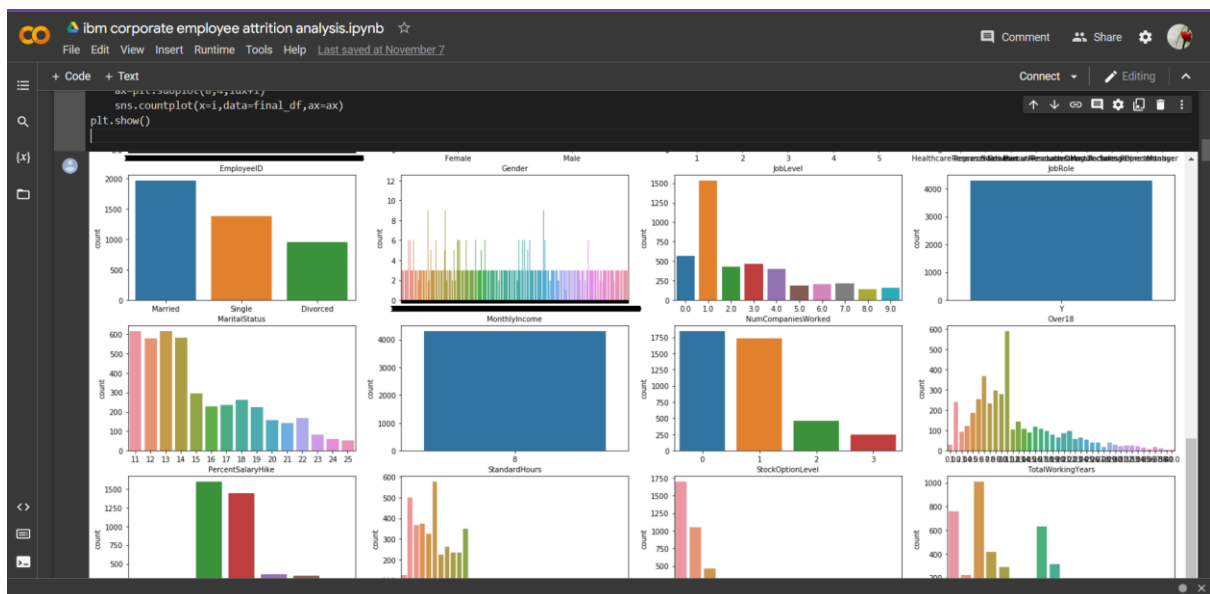

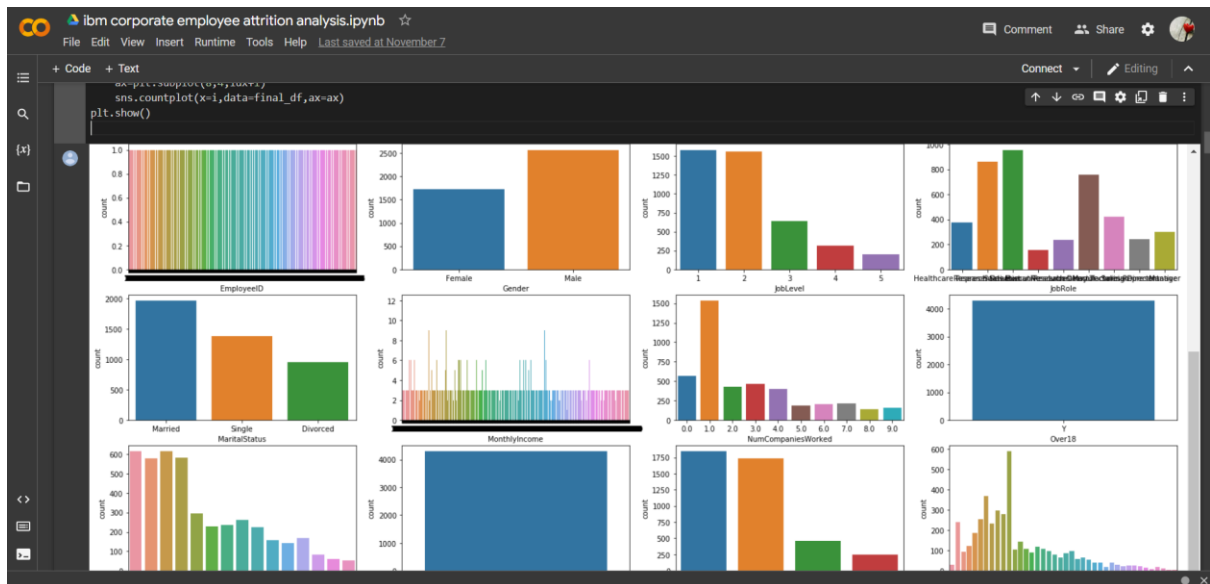

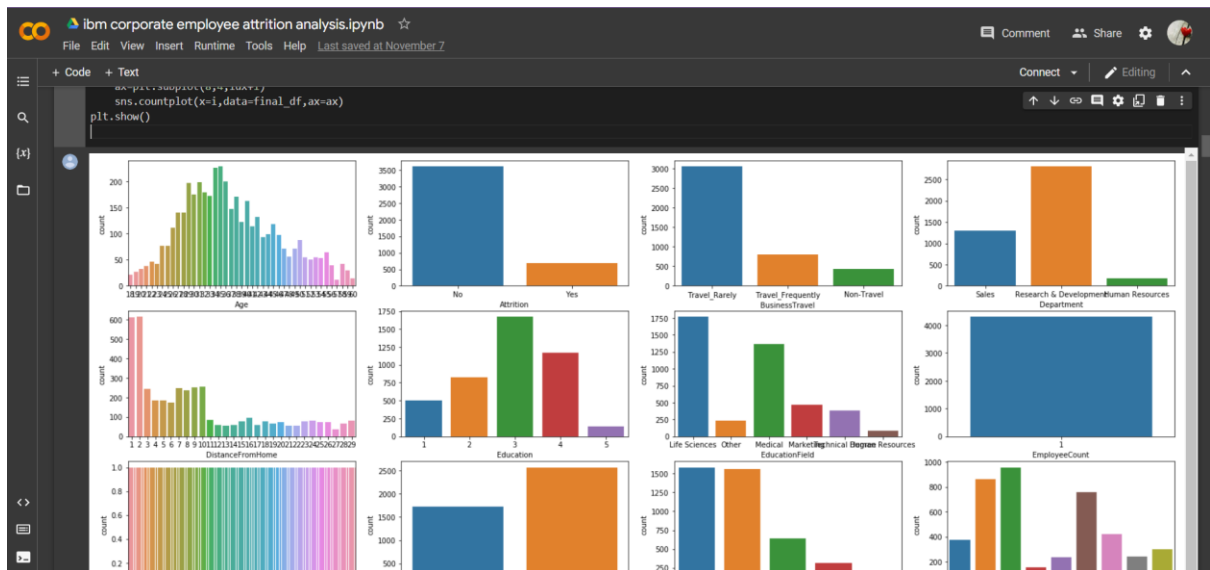

#### CODING:

```
#For all columns doing countplots
fig = plt.figure(figsize=(26,30))
for idx,i in enumerate(final_df.columns.tolist()):
    ax=plt.subplot(8,4,idx+1)
    sns.countplot(x=i,data=final_df,ax=ax)
plt.show()
```

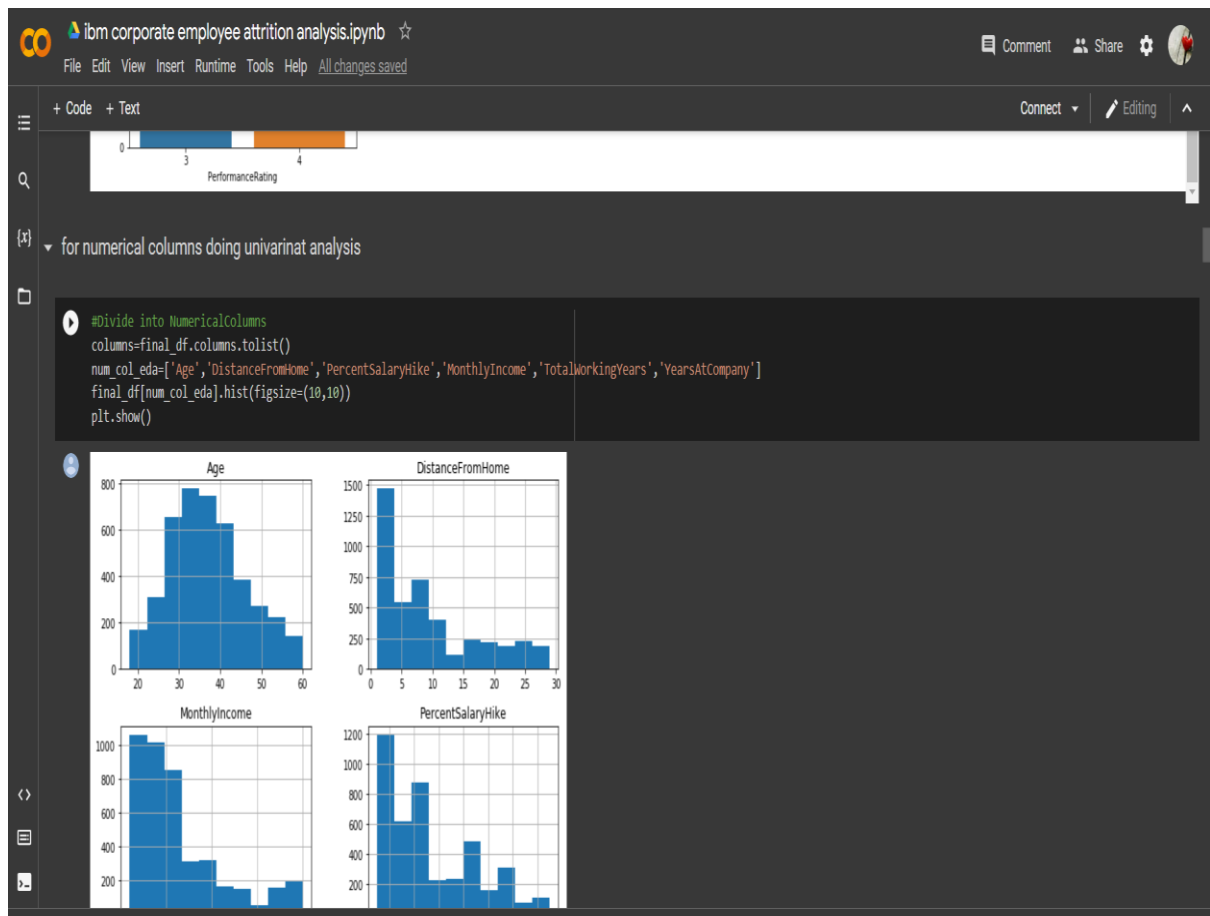

# FOR NUMERICAL COLUMNS DOING UNIVARIAT ANALYSIS

## CODING:

```
#Divide into NumericalColumns
```

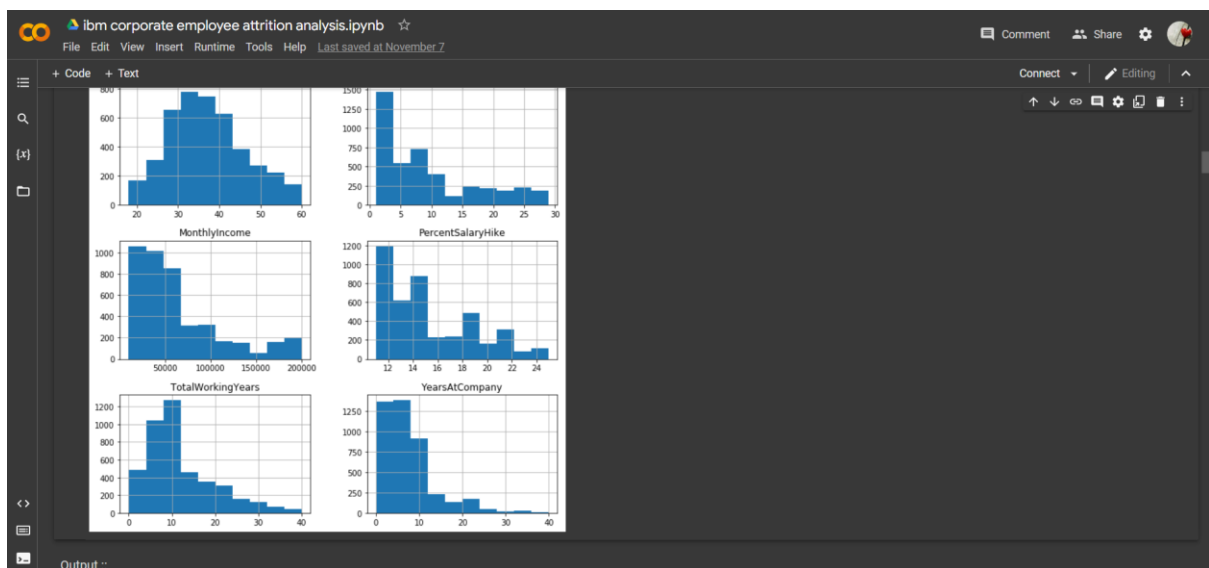

```
columns=final_df.columns.tolist()
```

```
num_col_edu=['Age','DistanceFromHome','PercentSalaryHike','MonthlyIncome',  
'TotalWorkingYears','YearsAtCompany']
```

```
final_df[num_col_edu].hist(figsize=(10,10))
```

```
plt.show()
```

## OUTPUT:

## INFERENCES

Key Observation from Above Plot are

- Except Age most of the Columns are in Skew Distribution form
- Age Feature Distribution is almost Normal Distribution
- As logistic regression does not require independent variables to be normal distributed .so i am not changing distribution of features which are skewed into the normal Distribution

## INSIGHTS

- **Attrition: Whether the employee left in the previous year or not**
  1. Employee who left in the previous year are 14% of population (1375) i.e. 192 who believe Environment Satisfaction is High in org. in org.
  2. Employee who left in the previous year are 15% of population (856) i.e. 129 who believe Environment Satisfaction is Medium in org.
  3. Employee who left in the previous year are 13% of population (1334) i.e. 173 who believe Environment Satisfaction is Very High in org.
  4. Employee who left in the previous year are 25% of population (845) i.e. 211 who believe Environment Satisfaction is Low in organization.

- People who left in the previous year & believe Environment Satisfaction is Low in org were 30% of population who left in the previous year. Second by People who left in the previous year & believe Environment Satisfaction is High in organization
